These solutions reflect assignments made by Professor Igor Klebanov at Princeton University during his semester course on General Relativity during the fall of 2006. The course began relatively slowly, and picked up pace toward the end. The homeworks reflect this.

Solutions to Problems in General Relativity

Special Relativity (1905) and General Relativity (1915), both due to Einstein's genius, are fundamental pillars of modern physics. They have revolutionized the scientific concepts of space and time, formerly due to everyday experience at a human scale, and also to previous scien-tific work and experiments made with clocks, very precise and ...

Introduction to General Relativity, Black Holes and Cosmology

General relativity generalizes special relativity and refines Newton's law of universal gravitation, providing a unified description of gravity as a geometric property of space and time, or spacetime. In particular, the curvature of spacetime is directly related to the energy and momentum of whatever matter and radiation are present.
