Animals and Why They Matter examines the barriers that our philosophical traditions have erected between human beings and animals and reveals that the too-often ridiculed subject of animal rights is an issue crucially related to such problems within the human community as racism, sexism, and age discrimination. Mary Midgley's profound and clearly written narrative is a thought-provoking study of the way in which the opposition between reason and emotion has shaped our moral and political ideas and the problems it has raised. Whether considering vegetarianism, women's rights, or the "humanity" of pets, this book goes to the heart of the question of why all animals matter.

Presents an urgent argument for the need to rethink animal welfare. In the vein of Temple Grandin's work, Dawkins explains that this welfare must be made to work in practice to have any effect, and cannot be tinged by anthropomorphism and claims of animal consciousness, which lack firm empirical evidence and are often freighted with controversy and high emotions. Instead, animal-welfare efforts must focus on science and on fully appreciating the critical role animals play in human welfare. With growing concern over such issues as climate change and food shortages, how we treat those animals on which we depend for survival needs to be put squarely on the public agenda.

Nonhuman animals have many of the same feelings we do. They get hurt, they suffer, they are happy, and they take care of each other. Marc Bekoff, a renowned biologist specializing in animal minds and emotions, guides readers from high school age up—including older adults who want a basic introduction to the topic—in looking at scientific research, philosophical ideas, and humane values that argue for the ethical and compassionate treatment of animals. Citing the latest scientific studies and tackling controversies with conviction, he zeroes in on the important questions, inviting reader participation with "thought experiments" and ideas for action. Among the questions considered: • Are some species more valuable or more important than others? • Do some animals feel pain and suffering and not others? • Do animals feel emotions? • Should endangered animals be reintroduced to places where they originally lived? • Should animals be kept in captivity? • Are there alternatives to using animals for food, clothing, cosmetic testing, and dissection in the science classroom? • What can we learn by imagining what it feels like to be a dog or a cat or a mouse or an ant? • What can we do to make a difference in animals' quality of life? Bekoff urges us not only to understand and protect animals—especially those whose help we want for our research and other human needs—but to love and respect them as our fellow beings on this planet that we all want to share in peace.

In this comprehensive introduction to animal ethics, Lori Gruen weaves together poignant and provocative case studies with discussions of ethical theory, urging readers to engage critically and empathetically reflect on our treatment of other animals. In clear and accessible language, Gruen provides a survey of the issues central to human-animal relations and a reasoned new perspective on current key debates in the field. She analyses and explains a range of theoretical positions and poses challenging questions that directly encourage readers to hone their ethical reasoning skills and to develop a defensible position about their own practices. Her book will be an invaluable resource for students in a wide range of disciplines including ethics, environmental studies, veterinary science, women's studies, and the emerging field of animal studies and is an engaging account of the subject for general readers with no prior background in philosophy.

...an excellent look at cruelty to animals on an institutional level in various industries, taking a 'common sense perspective' and revealing many disturbing facts .... This is a tough but fair-minded revelation of how mass production of animals for food and other purposes results in cruelty that usually remains hidden from sight. -Publishers WeeklyErin Williams and Margo DeMello have written a compact and compelling treatise on how animals suffer in institutional settings and why people of conscience should take note and take action. They have put together an overwhelming case for a new ethic in dealing with animals, and my greatest hope is that it will have a vast readership. -Wayne Pacelle, President & CEO, The Humane Society of the United StatesOur treatment of animals in modern America is full of contradictions. Pets are a beloved feature of most American households, many enjoying the most luxurious food and accessories, and reveling in the love and companionship from their human families. At the same time, animals raised for food or clothing, or used for medical experiments and product testing, often live painful, lonely lives in small cages from birth to death. And wild animals suffer in other ways - losing their lives as their habitats disappear, being hunted for trophies, and finding themselves removed from their homes for the exotic pet trade.Why Animals Matter: The Case for Animal Protection offers a concise yet complete overview of the problems of animal suffering, linking them to larger issues of human and environmental exploitation. Authors Erin E. Williams and Margo DeMello examine industries that exploit animals - meat processing companies and agribusinesses; medical experimentation and cosmetic testing facilities; the entertainment industry (circuses, rodeos, zoos, racing, and film making); the pet industry; the fur and leather industry; and commercial and recreational activities centered on hunting. The authors also consider the adverse environmental effects of animal exploitation from pollution to deforestation and the depletion of biodiversity.In addition, they look at the connections between the poor treatment of animals and human exploitation of immigrants, slaughterhouse and farm workers, as well as the larger issues of globalization, hunger, and the negative consequences for Third World nations.Highly informative yet very reader-friendly, this book not only explores the connections between animal and human suffering, but also integrates solid information with positive case studies of rescued animals and inspiring stories of individual successes.FURTHER PRAISE FOR WHY ANIMALS MATTER:Why Animals Matter isn't a good book. It's a great book!It's not only easy to read but also packed with useful and up-to-date information concerning the innumerable ways in which humans selfishly use animals, why animals need to be protected now more than ever, and how we all can play a role in this social movement by making humane choices that are good for animals and our one and only planet. I will recommend it to people worldwide. -Marc Bekoff, Professor of Biology, University of Colorado-Boulder Author of The Ten Trusts (with Jane Goodall) and The Emotional Lives of Animals; Editor of the Encyclopedia of Human-Animal Relationships: A Global Exploration of Our Connections with AnimalsErin E. Williams (Silver Spring, MD) works for the Humane Society of the United States.Margo DeMello (Pacatas, NM) is a lecturer at Central New Mexico Community College, administrative director of the House Rabbit Society, and the author of Bodies of Adornment, Bodies of Inscription, Low-Carb Vegetarian, and Stories Rabbits Tell.

Most people care about animals, but only a tiny fraction are vegan. The rest often think of veganism as an extreme position. They certainly do not believe that they have a moral obligation to become vegan. Gary L. Francione—the leading and most provocative scholar of animal rights theory and law—demonstrates that veganism is a moral imperative and a matter of justice. He shows that there is a contradiction in thinking that animals matter morally if one is also not vegan, and he explains why this belief should logically lead all who hold it to veganism. Francione dismantles the conventional wisdom that it is acceptable to use and kill animals as long as we do so "humanely." He argues that if animals matter morally, they must have the right not to be used as property. That means that we cannot eat them, wear them, use them, or otherwise treat them as resources or commodities. Why Veganism Matters presents the case for the personhood of nonhuman animals and for veganism in a clear and accessible way that does not require any philosophical or legal background. This book offers a persuasive and powerful argument for all readers who care about animals but are not sure whether they have a moral obligation to be vegan.

This collection of essays articulates theoretical and philosophical arguments, and advances practical applications, as to why animals ought to matter to social work, in and of themselves. It serves as a persuasive corrective to the current invisibility of animals in contemporary social work practice and thought.

Does living with a pet really make people happier and healthier? What can we learn from biomedical research with mice? Who enjoys a better quality of life—the chicken destined for your dinner plate or the rooster in a Saturday night cockfight? Why is it wrong to eat the family dog? Drawing on more than two decades of research into the emerging field of anthrozoology, the science of human–animal relations, Hal Herzog offers an illuminating exploration of the fierce moral conundrums we face every day regarding the creatures with whom we share our world. Alternately poignant, challenging, and laugh-out-loud funny—blending anthropology, behavioral economics, evolutionary psychology, and philosophy—this enlightening and provocative book will forever change the way we look at our relationships with other creatures and, ultimately, how we see ourselves.

Based on award-winning scientist Marc Bekoff's years studying social communication in a wide range of species, this important book shows that animals have rich emotional lives. Bekoff skillfully blends extraordinary stories of animal joy, empathy, grief, embarrassment, anger, and love with the latest scientific research confirming the existence of emotions that common sense and experience have long implied. Filled with Bekoff's light humor and touching stories, *The Emotional Lives of Animals* is a clarion call for reassessing both how we view animals and how we treat them.

In a world where we usually measure animals by human standards, prize-winning author and MacArthur Fellow Carl Safina takes us inside their lives and minds, witnessing their profound capacity for perception, thought and emotion, showing why the word "it" is often inappropriate as we discover who they really are. Weaving decades of observations of actual families of free-living creatures with new discoveries about brain functioning, Carl Safina's narrative breaches many commonly held boundaries between humans and other animals. In *Beyond Words*, readers travel the wilds of Africa to visit some of the last great elephant gatherings, then follow wolves of Yellowstone National Park sort out the aftermath of their personal tragedy, then plunge into the astonishingly peaceful society of killer whales living in waters of the Pacific Northwest. We spend quality time, too, with dogs and falcons and ravens; and consider how the human mind originated. In his wise and passionate new book, Safina delivers a graceful examination of how animals truly think and feel, which calls to question what really does—and what should—make us human.
