This training is designed to meet the needs of those who require an annual Basic Life Support update, such as medical personnel. The course can be tailored to specific clients and can be delivered with or without the use of the A.E.D. Course Duration: 2 to 4 Hours duration dependant on prior knowledge & required content

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Introduction and Objectives Early bystander cardiopulmonary resuscitation (CPR) improves outcomes after cardiac arrest. (1,2) Bystander CPR rate can be increased by offering training to potential lay rescuers. (3) Braydenu2019s Illuminating CPR Manikin offers a new approach to training with real-time feedback. The primary objective was to ascertain if candidatesu2019 hands off time and chest compression performance varies according to type of training manikin used. Materials and Methods Following a pilot/feasibility phase to estimate sample size, this randomised controlled trial was conducted as part of the University of Birminghamu2019s European Resuscitation Council (ERC) Basic Life Support (BLS) provider courses between October 2017 and April 2018 (see Figure 1). (4) Following randomisation, approximately half of enrolled students were trained using Brayden Illuminating CPR Manikins, and half using Laerdal Little Anne CPR Training manikins. All participants received a pass/fail grade at the end of their course and detailed reasons for failures were recorded. Quantitative CPR measurements (Laerdal Resusci Anneu00ae Wireless SkillReporter) (4) were taken at week 2 of each course and immediately post-testing. Statistical analysis was conducted using R v.3.5.0.Results 168 participants were enrolled into the study, 86 in the Brayden arms and 82 in the Laerdal arms. There was no difference between quantitative CPR performance measured via SkillReporter during or after CPR training between the two groups. There were no significant differences in exam failure rates due to compressions or hand positioning in either group. However, fewer people had difficulties with chest compression rate in the Brayden group (10 (59%) vs 9 (90%). There was no statistically significant difference in CPR performances between groups. ConclusionsBrayden Illuminating CPR manikins are equivalent to Laerdal Mini Anne manikins when used to train a highly motivated cohort of University students. Future work is underway to investigate their use in schoolchildren and as an adjunct during refresher training. References1.Hasselqvist-Ax I, Riva G, Herlitz J et al. Advanced Paediatric Life Support is the internationally renowned manual on emergency paediatric care, written to support the course run by the Advanced Life Support Group. Using their structured approach, a tried and tested practical method of treating children during the crucial first few hours of a life threatening illness or injury, Advanced Paediatric Life Support is used by doctors, nurses and allied health professionals dealing with emergencies in children. Its clear layout and straightforward style make it a highly practical tool both for training and in the event of an emergency. The sixth edition includes major new features bringing it right up to date, including: The latest International Liaison Committee on Resuscitation (ILCOR) 2015 Guidelines The latest consensus guidelines on paediatric trauma Enhanced discussions on the importance of human factors A new and improved design including full colour photographs and diagrams Free access to the Wiley E-Text With this book at hand, all those providing care during paediatric emergencies can be confident in having comprehensive and authoritative guidance on the recognition and management of life threatening conditions necessary to save a child's life. This title is also available as a mobile App from MedHand Mobile Libraries. Buy it now from iTunes, Google Play or the MedHand Store.

Get everything you need to review for the NCLEX-PN® exam from one trusted source! With over 4,500 high-quality review questions, this unique, bestselling review and preparation guide offers the perfect combination of core content review, comprehensive rationales, and detailed test-taking strategies from the NCLEX expert herself, Linda Silvestri. Updated to reflect the latest NCLEX-PN test plan, this new edition and companion Evolve website help you hone your understanding of all the important NCLEX-PN content areas. Full-color design makes for a more visually engaging learning experience. 12 pharmacology chapters address the emphasis on pharmacology questions on the NCLEX-PN exam. Priority Nursing Actions boxes outline and explain clinical emergent situations requiring immediate action, including detailed rationales and textbook references to help you strengthen prioritizing skills in clinical and testing situations. Pyramid Alert boxes reinforce learning of essential content frequently tested on the NCLEX-PN exam. Reference to a Mosby or Saunders textbook gives you resources for further study and self-remediation. Question codes categorize each question by cognitive level, client needs area, integrated process, clinical content area, and priority concepts to allow you multiple study and exam selections on the companion Evolve site. Inclusion of all alternate item formats (multiple response, ordered response, fill-in-the-blank, figure, chart/exhibit, audio, and video questions) offers practice with mastering prioritizing, decision-making, and critical thinking skills, and help prepare you for this additional component of the new test plan for NCLEX-PN. Pyramid to Success sections supply an overview of the chapter, guidance and direction regarding the focus of review in the content area, and its relative importance to the most recent NCLEX-PN test plan. Pyramid Points identify content that typically appears on the NCLEX-PN exam. Pyramid Terms give you a quick review of each content area. Introductory chapters on preparation guidance for the NCLEX-PN, nonacademic preparation, test-taking strategies, the CAT format, and the NCLEX-PN are presented from a new graduate ' s perspective. Companion Evolve site allows for automatic software updates to allow you to check for changes and updates to content or functionality throughout the life of the edition.

The Save a Life Initiative has just released its newest course: Basic Life Support. This manual is based on the 2015-2020 Basic Life Support guidelines published by the American Heart Association. The Basic Life Support (BLS) Provider Handbook is a comprehensive resource intended for health care professionals currently enrolled in a Basic Life Support Certification or Recertification Course. It serves as the primary training material for BLS Certification and Recertification courses. Although it is primarily intended for professionals to use during their courses, the handbook was also created to serve as daily resource material for health care professionals. Information covered in the handbook includes Basic Life Support instruction for adults and children, AED usage, airway obstruction and rescue breathing techniques, and more. Specific Algorithms for BLS and more are also included within the handbook. All material included in this handbook is delivered in a manner meant to enhance learning in the most comprehensive and convenient way possible.
