This publication contains the proceedings of a Seminar "Beef production from different dairy breeds and dairy beef crosses", held in Ireland on April 13-15, 1981, under the auspices of the Commission of the European Communities (CEC) as part of the European Communities (EC) programme for beef production research. The CEC wishes to thank those representatives of Ireland who took responsibility for the organisation and conduct of this Seminar, notably Professor E.P. Cunningham, Dr. G.J. More O'Ferrall (local organiser), Dr. Patricia McGlaughlin and In particular, thanks are due to Dr. McGlaughlin Mr. R. Barlow. and Mr. Barlow for their recording of the discussions. Professor Ian Gordon of the Faculty of Agriculture, kindly made available the facilities of Lyons House, University College, for the Seminar. Thanks are also accorded to the Chairmen of the Sessions Professor D. Smidt, Dr. R.B. Thiessen, Professor A. Neimann Sorensen, Professor E.P. Cunningham, and to all the participants who presented papers and took part in the discussions. X OBJECTIVES The aims of the Seminar were to review recent comparisons of Holstein and Friesian strains with other dairy breeds for beef and veal production; to look at the use of beef breeds for crossing on dairy herds in various EEC countries, and to examine the economic and genetic balance between milk and beef traits in dual purpose bull testing and selection.

It Is Evident From Recent Events That This Country Will In The Future Have To Be More Self-Supporting In All Agricultural Products Than It Has Been In The Past. While The Milk Industry In Recent Years, Thanks To The Application Of Science And A Body Of Progressive Producers, Guided By The Milk Marketing Board, Has Been Able To Lift Production Considerably, The Same Cannot Be Said Of The Beef Industry. The Methods Now Employed In Milk Production Are Very Different From Those Which Existed Fifty Years Ago, But The Methods Employed In Beef Production Have Shown Little Change During This Period. In This Book Author Has Attempt To Focus Attention On Some Of The Problems Of Beef Production Which Will Have To Be Solved Before It Regains Its Position In The Economy Of British Agriculture. All May Not Agree With The Solutions He Offers To These Various Problems, But The Problems Have Been Put, And If One Does Not Agree With The Solution Offered Then It Is Up To Those In The Industry To Offer A Better Solution. It Is Evident That Radical Changes In Methods Of Production Will Have To Be Made If The Beef Industry Is To Be Able To Stand On It Sown Legs. Science Has Shown That The Young Animal Is A Much More Efficient Converter Of Feeding Stuffs Into Meat Than Is An Old One, And In These Days Of High Costs Of Concentrates, It Might Well Pay The Eastern Countries Farmer Better To Fill His Yards With Yearlings During Their First Winter Rather Than To Fatten Older Bullocks. This Book Will Be Great Help To Farmers, Industrialists, Consultants, Researchers, Students, Other Concerned People And For Those Who Wants To Venture In To This Field. Contents Chapter 1: Beef Production As A Component Of British Farming; Chapter 2: The Development Of British Beef Breeds By Robert Bakewell; Chapter 3: Breeding: Variation And Its Basis; Chapter 4: Selection; Chapter 5: Methods Of Breeding; Chapter 6: Adaptation Of Breeding And Strains; Chapter 7: Growth, Development And Body Form In Cattle; Chapter 8: Beef Quality; Chapter 9: Nutrition Scientific Principles; Chapter 10: Nutrition Feeding Standard And Their Applications; Chapter 11: Beef From The Dairy Industry; Chapter 12: Fattening Of Cattle; Chapter 13: Beef Cattle On Hill And Marginal Land By A G Davis; Chapter 14: Economic Considerations.

Most of the future increase in livestock production is expected to occur in the tropical and subtropical regions of the world. Cattle are the most numerous of the ruminant species in the tropics and provide the largest quantity of animal food products. More than one-third of the world's cattle are found in the tropics. Disease is the major factor which prohibits full utilization of these regions for cattle production. Various infectious and transmissible viral, rick ettsial, bacterial, and particularly protozoan and helminthic diseases, are widespread in the tropics and exert a heavy toll on the existing cattle industry there. This uncontrolled disease situation also discourages investment in cattle industries by private and government sectors. In Africa alone, it is estimated that 125 million head of cattle could be accommodated in the tropical rainbelt if the disease and other animal husbandry factors could be resolved. The potential of efficient cattle production under more favorable conditions prompted various international agencies to establish a multi million dollar International Laboratory for Research in Animal Diseases (ILRAD) in Nairobi, Kenya, Africa. In South America, principal sites for raising cattle are shifting to the savannah lands because the more fertile soils are being used for crop produc tion, however, in the savannahs also, disease remains the most powerful deterrent in implementing the cattle industry.

For the love of Bessie, grab a glass of milk, pull up a comfy chair, and partake of a cow tale or two! These 40 stories by farmers and ranchers in the U.S. and Canada will open your eyes to what really goes on in those pastoral scenes with Holsteins, Jerseys, and other cattle breeds. Read about a 101-year-old cowgirl, close calls with bulls, cows and cops, steer roping, cattle branding, herds escaping, and the lovely dairy princesses promoting the healthful dairy industry. Be an armchair traveler with "Miss Lait" (Miss Milk) on her 1954 trip to France, meet a cow called "Grandma," read up on milking cows with baseball players, and see how butter magically turns into the likenesses of princesses. Meet "Patty" and "Paige" - - the Mother's Day cows, follow "Ferdy" the friendly bull, and learn about "Lulu" - - on the loose. "True Cow Tales is a true joy to read. If you have an association with livestock agriculture you will enjoy these short stories and poems. These brought back many memories of growing up on our family farm. True Cow Tales ought to be a part of everyone's family library and should be shared over and over." - Ken Rahjes, Farm Broadcaster for KRVN Radio, Lexington, Nebraska "As the world is further removed from agriculture, it's increasingly important to learn more about your sources of food, fiber and fuel. True Cow Tales is a truly moo-ving tribute to the beef and dairy industries, from the joy of buying your first cow and naming her Patty - yes, Cow Patty - to the wonder of watching a cow nurse an orphaned calf to the sorrow of no longer being able to financially support your farm. This anthology vividly depicts the importance of agriculture through a collection of stories and poems about the lives of farm animals and the dedicated people who care for them." - James Henry, AgriNews Publications Executive Editor "This anthology is an interesting gathering of a wide variety of stories and reminiscences regarding acquaintances and encounters with cattle." - Heather Smith Thomas, rancher and author of Storey's Guide to Raising Beef Cattle (1998); Essential Guide to Calving (2008); Cattle Health Handbook (2009); and more than 9000 stories and articles about cattle and horses. Ever moo to a cow - - or try not to? You may love cows more than you even realized. For a laugh, check out "Cattle Sillies." Need some adventure? Then turn to "Bovine Drama." Favorite cows are the theme of a chapter by that name. For a walk down "memory lane," flip to "Bovine Wistfulness." And for something quite different, enter the world of "Dairy Princesses" and meet the beautiful young women who love cows and spend an entire year of their lives promoting the dairy industry and handing out milk and cheese samples. Cheddar anyone? Follow your "inner moo." Read these stories for old time's sake, or just come along for the ride. And don't forget to drink your milk!

Material is organized into 5 parts for easy and ready use, broadening the usefulness of the book, making it the most comprehensive, hands-on AI manual available. This manual prepares users for the "real world" by exposing them to the latest technology and techniques used in the reproduction and the practice of artificial insemination (AI) in livestock. Part One provides information on the advantages and considerations of artificial insemination, basic livestock genetics, the anatomy and reproductive processes of the cow and bull, and semen collection methods. It relates statistics on AI usage and general information about NAAB and CSS. Part Two deals with semen characteristics, including evaluation, processing, and extension; freezing and cryogenic storage; and care of the refrigerator unit. The various tests for semen quality are discussed in detail as is custom selection of semen. Part Three explains insemination techniques for dairy and beef cattle, inseminator training, pregnancy determination in cattle, conception rates, and breeding problems. The exercise on "Embryo Transfer and Related Practices" explains the advances and techniques involved in the field. Part Four includes an overview of sire selection, sire health, sire management, AI organization, and career opportunities. Part Five explains the use and techniques for artificial insemination in dairy goats and other farm animals. For herd operators and persons involved in genetic development□of particular use to people interested in livestock improvement. For those who are anticipating careers in some phase of the AI industry.

Chromium nutritional supplements are the second best selling mineral supplements after calcium as chromium is found in pills, sports drinks, chewing gums, smoothies, and numerous other products. Chromium has been promoted to promote weight loss and muscle development and most recently to be available to treat the symptoms of type 2 diabetes and related conditions. The aim of The Nutritional Biochemistry of Chromium(III) is to examine the four most controversial areas of chromium nutrition and biochemistry: - is chromium an essential element for humans and are chromium nutritional supplements of value? - what biochemical role, if any, does
