Child Development: Its Nature and Course with Multimedia ...

The process of design and development of multimedia learning environments is complex and requires careful consideration of a number of basic elements. As part of the development of a multimedia tool, it is important to design appropriate conceptual Instructional Design (ID) model in order to promote understanding in learners.

DEVELOPMENT OF INTERACTIVE MULTIMEDIA COURSEWARE (E-CRAFT ...

A child with a secure attachment style usually explores freely while the mother is present and engages with the stranger. The child may be upset when the mother departs but is also happy to see the mother return. A child with an ambivalent (sometimes called insecure-resistant) attachment style is wary about the situation in general, particularly the stranger, and stays close or even clings to ...

The Development of Multimedia Courseware for Biotechnology Duruitru in 1999 and a computerized language learning program designed by El-Khouly in 2000 were all teaching methods that were very useful for students [12, 13]. Supplementary Teaching in Chinese at Primary school” run by the study group of Prof. Sun Chang-tian at National Tainan

This video based 2 CD ROM set covers classic and contemporary experiments in Child Development. Respected researcher Charlotte J. Patterson selected the video and wrote modules that can be assigned to students. The modules also include suggestions for additional projects as well as a testing component. Can be packaged with the text at a discount.

Child Development brings the research to life through stories. What prompted researcher Virginia Apgar to develop what became the Apgar Test on newborns? Who knew that psychologist Eleanor Gibson' famous "visual cliff" experiment was inspired by her own toddler's experience of hesitation in approaching the edge of the Grand Canyon? These stories help students appreciate the relevance of theory, helping them internalize research-intensive material. Through integrating such stories, this text provides the scientific rigor of Berk's child development books from Allyn & Bacon with the accessibility of Worth's Berger.

Infancy and Childhood, brings the research to life through stories. What prompted researcher Virginia Apgar to develop what became the Apgar Test on newborns? Who knew that psychologist Eleanor Gibson' famous "visual cliff" experiment was inspired by her own toddler's experience of hesitation in approaching the edge of the Grand Canyon? These stories help students appreciate the relevance of theory, helping them internalize research-intensive material. Through integrating such stories, this text blends scientific rigor with accessibility. This text covers child development from infancy through pre-adolescence.

Part of the Blackwell Series on Teaching Psychological Science, this practical, hands-on guide shares ideas, tips, and strategies for effectively teaching lifespan developmental psychology to undergraduates. Provides a unique wealth of concrete suggestions and a clear roadmap for successfully teaching developmental psychology Links chapters to major areas of a lifespan development course, including Research Methods, Teaching Infant Development, and Teaching Adolescent Development Offers practical, hands-on tips for novice teachers and experienced instructors alike Includes sample syllabi and lecture outlines, reading quizzes, critical thinking assignments, and references for helpful videotapes and websites

Although the field of child and adolescent development seems to be an easy one in which to provide active learning opportunities to students, few textbooks currently exist that actually do this. Child Development: An Active Learning Approach includes the following key features: - Challenging Misconceptions: true/false or multiple choice tests are incorporated at the beginning of each chapter to specifically address topics that are sources of misunderstanding amongst students. - Activities with children and adolescents: 'hands-on' activities that complement the ideas of the text, as an integral part of the text, rather than as "add-ons" at the end of each chapter. - 'The journey of research' will introduce students to the process of research that leads from early findings to more refined outcomes through real-life examples - 'Test Yourself' sections include activities that cause students to reflect on an issue through their own experiences to bring about increased motivation and understanding of a specific topic. - The Instructor's Resource CD-ROM includes a computerized test bank, PowerPoint Slides, sample syllabi, suggested in-class learning activities, and homework assignments. - The Student Study Site includes interactive videos, self-quizzes, key term flashcards, SAGE journal articles with accompanying exercises, and web links with accompanying exercises.

This book constitutes the refereed proceedings of the Third International Conference on Advances in Visual Informatics, IVIC 2013, held in Selangor, Malaysia, in November 2013. The four keynotes and 69 papers presented were carefully reviewed and selected from various submissions. The papers focus on four tracks: computer visions and engineering; computer graphics and simulation; virtual and augmented reality; and visualization and social computing.

Technology stimulates minds in ways that make a profound and lasting difference, especially in the classroom. It can be used to adapt curriculum to diverse learners or to express material in ways not possible prior to the creation of new technologies. Learning Tools and Teaching Applications through ICT Advancements provides research regarding introducing, collaborating, analyzing, synthesizing, and evaluating innovative contributions to the theory, practice, and research of technology education applicable to K-12 education, higher education, and corporate and proprietary education. It grows this body of research, proposing new applications of technology for teaching and learning, and documenting those practices that contribute irrefutable verification of information technology education as a discipline.

In the topically organized Child Development: An Active Learning Approach, Fourth Edition, authors Laura E. Levine and Joyce Munsch take students on an active journey toward understanding children and their development. Active Learning activities integrated throughout the text capture student interest and turn reading into an engaged learning process. Through the authors' active learning philosophy, students are challenged to test their knowledge, confront common misconceptions, relate the material to their own experiences, and participate in real-world activities independently and with children. Because consuming research is equally important in the study of child development, Journey of Research features provide both historical context and its links to today's cutting-edge research studies. Students will discover the excitement of studying child development while gaining skills they can use long after course completion. This title is accompanied by a complete teaching and learning package. Contact your SAGE representative to request a demo.
