The #1 New York Times bestselling memoir of U.S. Navy Seal Chris Kyle, and the source for Clint Eastwood's blockbuster movie which was nominated for six academy awards, including best picture. From 1999 to 2009, U.S. Navy SEAL Chris Kyle recorded the most career sniper kills in United States military history. His fellow American warriors, whom he protected with deadly precision from rooftops and stealth positions during the Iraq War, called him "The Legend"; meanwhile, the enemy feared him so much they named him al-Shaitan ("the devil") and placed a bounty on his head. Kyle, who was tragically killed in 2013, writes honestly about the pain of war—including the deaths of two close SEAL teammates—and in moving first-person passages throughout, his wife, Taya, speaks openly about the strains of war on their family, as well as on Chris. Gripping and unforgettable, Kyle's masterful account of his extraordinary battlefield experiences ranks as one of the great war memoirs of all time.

This sweet, savory, and satisfying novel—perfect for fans of The Coincidence of Coconut Cake by Amy Reichert—follows a smart, ambitious woman making her way in the male-dominated world of beer brewing. Piper Williams is used to being the only woman in a room full of men, but she isn't used to being instantly drawn to someone she's in business with. After working long hours brewing in her garage, Piper is determined to prove herself—and to ignore the chemistry she has with Blake Reed, owner of Minnesota's newest gastropub who is going to stock four of her brews. She wants her craft beer to stand on its own merits and knows that the tight-knit male-dominated brewer community will assume the worst if she starts anything with one of her vendors. No way she'll risk everything she's invested in her budding business on a guy who might not stick—no matter how charmingly handsome and funny he is, right? And Blake has a conflict of his own—his haughty family wants him to ditch the gastropub and support his father's political campaign. Well, that, and the fact that he knows Piper's snark and sass is the perfect blend of crisp and refreshing for him. So Blake and Piper make a pact: she'll go out with him if, and only if, two additional pubs start carrying her beer. Sticking to the pact proves harder than either of them expected—especially since the attraction is off the charts between quirky, independent Piper and smart, charming Blake. Then Piper gets a once-in-a-lifetime offer that could launch her company to the next level—and take her away from Blake. Are she and Blake just drunk in love, or do they have something real that's worth risking her dreams for?

Applied Network Security Monitoring is the essential guide to becoming an NSM analyst from the ground up. This book takes a fundamental approach to NSM, complete with dozens of real-world examples that teach you the key concepts of NSM. Network security monitoring is based on the principle that prevention eventually fails. In the current threat landscape, no matter how much you try, motivated attackers will eventually find their way into your network. At that point, it is your ability to detect and respond to that intrusion that can be the difference between a small incident and a major disaster. The book follows the three stages of the NSM cycle: collection, detection, and analysis. As you progress through each section, you will have access to insights from seasoned NSM professionals while being introduced to relevant, practical scenarios complete with sample data. If you've never performed NSM analysis, Applied Network Security Monitoring will give you an adequate grasp on the core concepts needed to become an effective analyst. If you are already a practicing analyst, this book will allow you to grow your analytic technique to make you more effective at your job. Discusses the proper methods for data collection, and teaches you how to become a skilled NSM analyst Provides thorough hands-on coverage of Snort, Suricata, Bro-IDS, SiLK, and Argus Loaded with practical examples containing real PCAP files you can replay, and uses Security Onion for all its lab examples Companion website includes up-to-date blogs from the authors about the latest developments in NSM
