other policies that have evolved to address public health concerns associated with specific environmental hazards, and the public health foundations of the policies. It lays out policies for what is considered the major environmental physical hazards to human health. Specifically, the authors describe hazards from air, water, food, hazardous substances, and wastes. To this list the authors have added the additional concerns from climate change, tobacco products, genetically-modified organisms, environment-related diseases, energy production, biodiversity and species endangerment, and

the built environment. And as with the first edition, histories of policymaking for specific environmental hazards are portrayed. This edition differs from its antecedent in three significant themes. Global perspectives are added to chapters that describe specific environmental hazards, e.g., air pollution policies in China and India. Also there is the material on the consequences of environmental hazards on both human and ecosystem health. Additionally readers are provided with information about interventions that policymakers and individuals can consider in mitigating or preventing specific

start talking about them together. Climate Change and the People's Health offers a brave and ambitious new framework for understanding how our planet's two greatest existential threats comingle, complement, and amplify one another -- and what can be done to mitigate future harm. In doing so it posits three new modes of thinking: - That climate change interacts with the social determinants of health and exacerbates existing health inequities - The idea of a "consumptagenic system" -- a network of policies, processes, governance and modes of understanding that fuel unhealthy, and environmentally
