Project management is of critical importance in construction, yet its execution poses major challenges. In order

to keep a project on track, decisions often have to be made before all the necessary information is available.

Drawing on a wide range of research, *Managing Construction Projects* proposes new ways of thinking about project management in construction, exploring the skills required to manage uncertainty and offering techniques for thinking about the challenges involved. The second edition takes the information processing perspective introduced in the first edition and develops it further. In particular, this approach deepens the reader's understanding of the dynamics in the construction project process— from the value proposition inherent in the project mission, to the functioning asset that generates value for its owners and users. *Managing Construction Projects* is a unique and indispensable contribution to the available literature on construction

project management. It will be of particular benefit to advanced students of construction and construction project management, as well as contractors and quantity surveyors. Reviews of the First edition: "A massive review of the art and science of the management of projects that has the great virtue of being a good read wherever it is touched. It spills the dirt on things that went wrong, elucidates the history so you can understand the industry's current stance, draws on other countries' experience and explains the latest management processes. Throughout it is liberally sprinkled with anecdotes and case histories which amply illustrate the dos and don'ts for practitioners wishing to deliver projects on time to expected quality and price. A valuable book for students and practitioners alike." —John D Findlay, Director, Stent "This is a valuable source for practitioners and students. It covers the

A-Z of project management in a confident contemporary manner, and provides a powerful and much needed conceptual perspective in place of a purely prescriptive approach. The engaging presentation introduces a range of challenges to established thinking about project management, often by making comparisons between practices in the UK and those of other countries."

—Peter Lansley, Professor of Construction Management, University of Reading "A refreshing and unique study of information management and its impact upon international construction project management.... The book is well presented and written, logical and succinct and is flexible enough to allow readers to either read from start to finish or to dip into selected chapters. the workplace with its use of real world examples and case studies, Nick Wilton's book is not another 'How to?' of HRM in practice, but goes beyond the prescriptive approach to the practice of strategic HRM and encourages critical reflection to prepare students for the issues and dilemmas they could face in their careers. Providing an introduction to the management of people in work organizations, it seeks to outline the purpose and operation of HRM activities in the 'real world?', whilst situating practice in the context of associated debates and controversies played out in the parallel field of academic study. It adopts a critical perspective on the study and practice of HRM to provide the reader with an understanding not only of the potential for HRM to contribute to both improved organizational performance and individual well-being in the workplace,

The book is aimed at project managers and students of project management who, until now, have been handed the responsibility for human resource management without adequate knowledge or training. The issues addressed in this book are internationally relevant, and are of fundamental concern to both students and practitioners involved in the management of construction projects. The text draws on the authors' experience of working with a range of large construction companies in improving their HRM operational activities at both strategic and operational levels, and is well illustrated with case studies of projects and organizations.
