CDC disease detectives were first deployed in 1958 to investigate a cholera and smallpox epidemic in Southeast Asia. Today the EIS is a two-year, hands-on post-doctoral training program in epidemiology, with a focus on field work. Every year the CDC selects 70 to 80 individuals to enter the program.

The Center for Disease Control (CDC) began referring to the swine flu as the " Novel Influenza A (H1N1) " in an effort to protect the pork industry. [11] The 2009 H1N1 virus contained genetic elements from North American swine flu, North American avian flu (bird flu), and human and swine flus typically found in Asia and Europe.

This year, we celebrate 40 years of Field Epidemiology Training Programs (FETP). These hands-on programs, based on CDC ' s Epidemic Intelligence Service (EIS), train disease detectives to act as " boots on the ground, " tracking, containing, and eliminating outbreaks before they become epidemics. In 1980, Thailand initiated the very first FETP — then known as " Global EIS " — outside of North America.

Thomas Johnson is a surveillance investigator and outbreak coordinator for the Health Department. When the virus began to spread locally, Johnson was initially working with the division that investigates outbreaks in long-term care facilities such as nursing homes, but his role shifted to coordinate outbreak efforts and track the spread of the virus originating from work sites like office buildings and public spaces such as grocery stores, gas stations or airports.
