The revised and extended papers collected in this volume represent the cutting-edge of research at the nexus of electrical engineering and intelligent systems. They were selected from well over 1000 papers submitted to the high-profile international World Congress on Engineering held in London in July 2011. The chapters cover material across the full spectrum of work in the field, including computational intelligence, control engineering, network management, and wireless networks. Readers will also find substantive papers on signal processing, Internet computing, high performance computing, and industrial applications. The Electrical Engineering and Intelligent Systems conference, as part of the 2011 World Congress on Engineering was organized under the auspices of the non-profit International Association of Engineers (IAENG). With more than 30 nations represented on the conference committees alone, the Congress features the best and brightest scientific minds from a multitude of disciplines related to engineering. These peer-reviewed papers demonstrate the huge strides currently being taken in this rapidly developing field and reflect the excitement of those at the frontiers of this research.

The story of the Perodua Myvi.

" A good read for anyone who wants to understand what actually determines whether a developing economy will succeed " (Bill Gates, " Top 5 Books of the Year "). An Economist Best Book of the Year from a reporter who has spent two decades in the region, and who The Financial Times said " should be named chief myth-buster for Asian business. " In How Asia Works, Joe Studwell distills his extensive research into the economies of nine countries—Japan, South Korea, Taiwan, Indonesia, Malaysia, Thailand, the Philippines, Vietnam, and China—into an accessible, readable narrative that debunks Western misconceptions, shows what really happened in Asia and why, and for once makes clear why some countries have boomed while others have languished. Studwell ' s in-depth analysis focuses on three main areas: land policy, manufacturing, and finance. Land reform has been essential to the success of Asian economies, giving a kick-start to development by utilizing a large workforce and providing capital for growth. With manufacturing, industrial development alone is not sufficient, Studwell argues. Instead, countries need " export discipline, " a government that forces companies to compete on the global scale. And in finance, effective regulation is essential for fostering, and sustaining growth. To explore all of these subjects, Studwell journeys far and wide, drawing on fascinating examples from a Philippine sugar baron ' s stifling of reform to the explosive growth at a Korean steel mill. " Provocative . . . How Asia Works is a striking and enlightening book . . . A lively mix of scholarship, reporting and polemic. " —The Economist

Electrical Engineer's Reference Book, Fourteenth Edition focuses on electrical engineering. The book first discusses units, mathematics, and physical quantities, including the international unit system, physical properties, and electricity. The text also looks at network and control systems analysis. The book examines materials used in electrical engineering. Topics include conducting materials, superconductors, silicon, insulating materials, electrical steels, and soft irons and relay steels. The text underscores electrical metrology and instrumentation, steam-generating plants, turbines and diesel plants, and nuclear reactor plants. The book also discusses alternative energy sources. Concerns include wind, geothermal, wave, ocean thermal, solar, and tidal energy. The text then looks at alternating-current generators. Stator windings, insulation, output equation, armature reaction, and reactants and time-constraints are described. The book also examines overhead lines, cables, power transformers, switchgears and protection, supply and control of reactive power, and power systems operation and control. The text is a vital source of reference for readers interested in electrical engineering.

This acclaimed text and practitioner reference presents an authoritative overview of major models of cognitive-behavioral therapy (CBT). Foremost treatment developers explain core CBT principles and provide a framework for systematic assessment, case conceptualization, and treatment planning. Scholarly yet accessible chapters on each therapy detail what makes the approach unique, which clinical problems it is used to treat, what assessment and intervention tools have been developed, how they are implemented, and what the research reveals about the therapy ' s effectiveness. Special topics include working with children and adolescents, couples, and culturally diverse clients. The Handbook has been widely adopted in training programs, and the revisions in this edition reinforce its value as a text. New to This Edition * The latest findings and clinical advances. * Additional therapies: schema therapy and mindfulness- and acceptance-based interventions. * Chapter on the empirical evidence base for CBT. * Chapters on treatment of couples and culturally diverse clients.

This book is open access under a CC BY-NC-ND license. This volume analyzes the economic, social, and political challenges that emerging states confront today. Notwithstanding the growing importance of the 'emerging states' in global affairs and governance, many problems requiring immediate solutions have emerged at home largely as a consequence of the rapid economic development and associated sociopolitical changes. The middle-income trap is a major economic challenge faced by emerging states. This volume regards interest coordination for technological upgrading as crucial to avoid the trap and examines how various emerging states are grappling with this challenge by fostering public-private cooperation, voluntary associations of market players, and/or social networks. Social disparity is another serious problem. It is deeply rooted in history in the emerging states such as South Africa and many Latin American countries. However, income distribution is recently deteriorating even in East Asia that was once praised for its high economic growth with equity. Increasing pressure for political opening is another challenge for emerging states. This volume argues that the economic, social, and political problems are interwoven in the sense that the emerging states need to build political consensus in order to tackle the economic and social difficulties. Democratic institutions have not always been successful in this respect.

With this book, you can handle all of the maintenance needs of your four-stroke small engine, whatever the brand, and take on virtually any repair project. It guides you through each procedure in clear, concise steps, with more than 325 color photographs and illustrations. Small Engine Care & Repair provides more than just detailed instructions and glossy photos. It teaches you the principles of small engine operation, so you can broaden your knowledge, whether you're performing maintenance or repairs or just want to understand your equipment better. This book is a resource for beginners and seasoned home mechanics alike, with a wealth of information on specialty tools, safety and other issues affecting your small engine. This new, expanded edition has been revised to include an important section on seasonal maintenance, and updated to include the latest engines, maintenance products, and tools.

Better than fireworks, this classic Beginner Book edited by Dr. Seuss celebrates all the wonderful things that come with summer! From trips to the beach and eating watermelon to fireworks and fishing, Alice Low and Roy McKie ' s Summer will have young readers eager for the kind of fun only warm breezes and sunny weather can bring. Originally created by Dr. Seuss, Beginner Books encourage children to read all by themselves, with simple words and illustrations that give clues to their meaning.

"East Asia is the most competitive and dynamic industrial region in the developing world. This is universally acknowledged but not yet fully understood. In particular, the different strategies the "Tiger" economies used to access and absorb foreign technologies, and the interaction of technology imports with domestic technological effort, have not been sufficiently explored. This book addresses this imbalance with new country studies on the interaction between foreign direct

investment (FDI) and technological activity in building export competitiveness. The book covers China, Indonesia, Japan, Korea, Malaysia, Philippines, Singapore, Taiwan and Thailand." - BOOK JACKET.
