This IBM® Redbooks® publication presents a general introduction to the latest (current) IBM tape and tape library technologies. Featured tape technologies include the IBM LTO Ultrium and Enterprise 3592 tape drives, and their implementation in IBM tape libraries. This 17th edition includes information about the latest TS4300 Ultrium tape library, TS1155 Enterprise tape drive, and the IBM Linear Tape-Open (LTO) Ultrium 8 tape drive, along with technical information about each IBM tape product for open systems. It includes generalized sections about Small Computer System Interface (SCSI) and Fibre Channel connections, and multipath architecture configurations. This book also covers tools and techniques for library management. It is intended for anyone who wants to understand more about IBM tape products and their implementation. It is suitable for IBM clients, IBM Business Partners, IBM specialist sales representatives, and technical specialists. If you do not have a background in computer tape storage products, you might need to read other sources of information. In the interest of being concise, topics that are generally understood are not covered in detail.

The Story of a Childhood and The Story of a Return The intelligent and outspoken child of radical Marxists, and the great-granddaughter of Iran's last emperor, Satrapi bears witness to a childhood uniquely entwined with the history of her country. Persepolis paints an unforgettable portrait of daily life in Iran and of the bewildering contradictions between home life and public life. This is a beautiful and intimate story full of tragedy and humour - raw, honest and incredibly illuminating.

Magnetic Components for Power Electronics concerns the important considerations necessary in the choice of the optimum magnetic component for power electronic applications. These include the topology of the converter circuit, the core material, shape, size and others such as cost and potential component suppliers. These are all important for the design engineer due to the emergence of new materials, changes in supplier management and the examples of several component choices. Suppliers using this volume will also understand the needs of designers. Highlights include: Emphasis on recently introduced new ferrite materials, such as those operating at megahertz frequencies and under higher DC drive conditions; Discussion of amorphous and nanocrystalline metal materials; New technologies such as resonance converters, power factors correction (PFC) and soft switching; Catalog information from over 40 magnetic component suppliers; Examples of methods of component choice for ferrites, amorphous nanocrystalline materials; Information on suppliers management changes such as those occurring at Siemens, Philips, Thomson and Allied-Signal; Attention to the increasingly important concerns about EMI. This book should be especially helpful for power electronic circuit designers, technical executives, and material science engineers involved with power electronic components.

In Homer Economicus a cast of lively contributors takes a field trip to Springfield, where the Simpsons reveal that economics is everywhere. By exploring the hometown of television's first family, this book provides readers with the economic tools and insights to guide them at work, at home, and at the ballot box. Since The Simpsons centers on the daily lives of the Simpson family and its colorful neighbors, three opening chapters focus on individual behavior and decision-making, introducing readers to the economic way of thinking about the world. Part II guides readers through six chapters on money, markets, and government. A third and final section discusses timely topics in applied microeconomics, including immigration, gambling, and health care as seen in The Simpsons. Reinforcing the nuts and bolts laid out in any principles text in an entertaining and culturally relevant way, this book is an excellent teaching resource that will also be at home on the bookshelf of an avid reader of pop economics.

This book is primarily intended to serve as a research-based textbook on sustainable supply chains for graduate programs in Business, Management, Industrial Engineering, and Industrial Ecology, but it should also be of interest for researchers in the broader sustainable supply chain space, whether from the operations management and industrial engineering side or more from the industrial ecology and life-cycle assessment side. Finding efficient solutions towards a more sustainable supply chain is increasingly important for managers, but clearly this raise difficult questions, often without clear answers. This book aims to provide insights into these kinds of questions for students and practitioners, based on the latest academic research.

This volume of the acclaimed Methods in Cell Biology series provides specific examples of applications of confocal microscopy to cell biological problems. It is an essential guide for students and scientists in cell biology, neuroscience, and many other areas of biological and biomedical research, as well as research directors and technical staff of microscopy and imaging facilities. An integrated and up-to-date coverage on the many various techniques and uses of the confocal microscope (CM). Includes detailed protocols accessible to new users Details how to set up and run a "Confocal Microscope Core Facility" Contains over 170 figures

In this essential and illuminating book, top business strategist Dev Patnaik tells the story of how organizations of all kinds prosper when they tap into a power each of us already has: empathy, the ability to reach outside of ourselves and connect with other people. When people inside a company develop a shared sense of what's going on in the world, they see new opportunities faster than their competitors. They have the courage to take a risk on something new. And they have the gut-level certitude to stick with an idea that doesn't take off right away. People are "Wired to Care," and many of the world's best organizations are, too. In pursuit of this idea, Patnaik takes readers inside big companies like IBM, Target, and Intel to see widespread empathy in action. But he also goes to farmers' markets and a conference on world religions. He dives deep into the catacombs of the human brain to find the biological sources of empathy. And he spends time on both sides of the political aisle, with James Carville, the Ragin' Cajun, and John McCain, a national hero, to show how empathy can give you the acuity to cut through a morass of contradictory information. Wired to Care is a compelling tale of the power that people have to see the world through each other's eyes, told with passion for the possibilities that lie ahead if leaders learn to stop worrying about their own problems and start caring about the world around them. As Patnaik notes, in addition to its considerable economic benefits, increasing empathy for the people you serve can have a personal impact, as well: It just might help you to have a better day at work.
