Ideas • If N a number N can be written as a product of two whole numbers, $= a \times b$, then a and b are factors of N . Multiples of a can be found using the expression $a \times$ (some whole number), such as $2a$, $3a$, $4a$ etc. • When all factors of a number are broken down into prime numbers, you have a unique prime

give 30, which would be $2 \times 3 \times 5$. It is typical to write the prime factorization in order from least to greatest. The first few prime numbers are 2, 3, 5, 7, 11, 13, 17, 19... One way to find the prime factorization is to create a factor tree. A “branch” stops once a prime number is found.

Illuminations**

A number can be written as a product of its prime factors, e.g. $[36=2 \times 2 \times 3 \times 3]$. A factorization in which every factor is prime is called prime factorization of the number. Two numbers are co-prime if they have only 1 as the common factor.
