have merits and demerits individually, and the first method can differently evaluate the severity according to vehicle type, so it has a defect that cannot consistently apply the severity data inflicted on the wheeled and tracked vehicle.

Development of Standardization and Management System for ...

The resolution of the terrain raster image created during the terrain generation process. This value indicates maximum row/column size of the output raster. With a setting of 2000, maximum terrain raster will be 2000 x 2000 pixels. The software also attempts to optimize this terrain raster size based on data density and extents.
